

# COSC 120 – Lab #9

Do a little programming.

Purpose: A quick exercise to keep fresh on programming

Tasks:

- 1.) Open BlueJ and create a new class called Lab9.
- 2.) In the Lab 9 class create a method called printTriangle. printTriangle takes one parameter, an integer called n. The method should print out a triangle with n rows like so:

n = 5:

```
*  
**  
***  
****  
*****
```

n = 8:

```
*  
**  
***  
****  
*****  
*****  
*****  
*****  
*****
```

I should be able to send the method any integer and get the appropriate triangle.

Things needed: Loops!
