COSC 201 – Lab #3
Generic Header Goes Here

Purpose: to practice using Java generics

Tasks:

1.) Open Eclipse and start a new Java Project called Generic Project

2.) Add a new class called MyGenerics.

3.) For this lab, you will add two generic methods to MyGenerics:

   a. min, where an array (of indeterminate type) is passed in as a
       parameter and the minimum element is returned.
   b. max2, which accepts an array (of no fixed type) is passed in as
       a parameter and the largest two elements are returned.

4.) Create a main (can be part of MyGenerics) that will test your generic
    methods. You should test these with Integer arrays (note, not int) and
    String arrays.

5.) HINT: You will not be able to create a generic array to return from
    max2 - it will give you a compile error. Think about what you could
    return, including other possible data structures beyond a simple array.

6.) Turn in your code via the Digital Dropbox in Blackboard by 11:59pm
    Monday.
