

COSC 251 – Lab #7

Lisping in the darkness.

Purpose: Get used to using emacs and LISP.

Task: For this lab, I'd like you to create three functions (like we have for previous languages). These functions should be familiar to you: summation, factorial, Fibonacci. Yes, I know I haven't shown you any control structures yet.

Deliverable: the lisp code that you create. It must be submitted via Digital Dropbox. Email submissions to me will be ignored (since Jen is grading the labs).

This lab may be worked on in pairs.

Due: By the start of class Monday. No exceptions. To be turned in via Digital Dropbox.
