COSC 251 – Lab #6
No summation or recursion here!

Purpose: Stretch your brain.

Task: Utilizing Befunge, create a for loop analog. All the loop should do is keep a counter, inputted by the user and print the counter squared each time through. Make the code as small as possible. For instance, if the user inputs 5, the program should print 1, 4, 9, 16 and 25.

Deliverable: the Befunge source. It should be, well, commented.

Due: By the start of class Monday. No exceptions. To be turned in via Digital Dropbox.
