COSC 251 – Programming Languages
Presentations!
Spring 2011

Objective: Present a language in a lecture format for your fellow classmates (and my) edification.

Your Task: In teams of 3 you will do the following:

- Decide on a programming language not presented in this class, which must be approved by the instructor. As a hint, Java and C# will not be approved.
- Develop an hour long lecture to be presented in class during the last two weeks of class.
- Develop a programming assignment similar to the lab assignments you have worked on during this semester. You will present both the assignment and its solution during the presentation

You will be graded on clarity of your lecture, content and length as well as addressing each of the 7 aspects of a programming language we have touched on for each of our languages to this point. Your fellow classmates, your TA and your instructor will be grading you on your presentation.

Expectations: A clear, professional lecture and a well-developed programming assignment. You will turn in your programming assignment and solution via Digital Dropbox by 11:59pm the night before your lecture.

NOTE: You will be assigned your presentation day the day that groups are assigned. It will be during the final two weeks of the semester. Presentations start 4/15.
