

COSC 251 – Lab #5

Choose Your Own Adventure

Purpose: Get practice with xHTML and CSS by designing a series of simple web pages. Creativity is key!

Task: Build an informational website about a topic of your choosing. (Silly or serious—you decide!). It must include:

- * At least three .htm pages that are linked together
- * A single .css stylesheet that is linked to every .htm page
- * Three or more images. At least one of the images should also be a link.
- * At least one link to an external site (i.e. not one of your own .htm files)
- * One instance of in-line styling (i.e. the style is defined as an attribute in the html tag)
- * At least three div tags that you define in the CSS and implement in your .htm file(s)
- * Something other than the standard style for links
- * Play around as much as you want with colors, positioning, images, fonts, list styles, and any other styling that interests you!

Please use the w3schools tutorials on HTML and CSS to help you out! The tutorials are very useful, and looking through them will give you ideas as to how you can create and style your site.

Deliverable: Your .htm files and your external stylesheet (.css file). Please zip all the files together if possible.

Due: By 11:59pm Monday. No exceptions. To be turned in via Blackboard.
