

COSC 251 – Programming Languages

Project 3

Spring 2013

Objective: Use Malbolge, and don't hate me.

Your Task: Take the “Hello, World!” program posted to the course website and get it to print your name instead. That's it.

Deliverables: your Malbolge source. It should work with the web-based interpreter linked on the course page. If you choose to write a translator or generator of some kind, that source should be included as well.

Expectations: The code should run and perform the task assigned. That's about it. That's about all I can expect. There is a code generator out there for malbolge - you are expressly forbidden from using that resource. Use of that resource will result in a 0 for the project. You are allowed to work in pairs for this project. If you choose to work with someone, one member of the pair should email me that information by 5:00pm, March 22nd.

Learning Targets: Esoteric language experience. Brain-melting programming paradigm experience.

DUE: March 29th, 11:59pm via Blackboard
