Additional Comments on the paper as a whole

Note: Each section above should consist of your evaluation of the quality and appearance of the section of the author's paper indicated in the section headings. Be sure to praise as well as criticize. We need both to improve our work. Be specific, and make constructive suggestions for improvement whenever possible. Be candid but gentle, without distorting your views. Don't avoid criticism trying to be kind, but don't be abusive, either. It also helps to express your criticisms as YOUR reactions. For example, instead of saying "The logic of your hypothesis doesn't make sense." Say "I can't understand the logic of your hypothesis. Something seems to be said about . . . following the second sentence where you state . . ."
